Guide 09: Known Limitations and Gotchas	10

Start Here: How the Website Works (Read This First)

This is a 3 minute read. It explains, in plain words, how your website works now and how your edits reach the live site. The other guides show you exactly how to do each task.

The one thing to understand

You still work in WordPress, exactly like before. Nothing about your daily work changes.

WordPress is now the “control room.” The public website that visitors see is a separate, faster website. Whenever you save something in WordPress, it automatically copies over to the live website.

Think of it like a kitchen and a dining room. You cook in the WordPress kitchen. Visitors eat in the dining room (the live website). You never have to walk into the dining room. The food travels there on its own.

1

What you can change from WordPress

Everything that matters for content:

- The words on any page
- Images on pages
- Blog posts
- Service pages

- Most top-level items in the navigation menu
- The phone number and email shown across the whole site

You do NOT need a developer for any of these. You do them yourself in WordPress, and they appear on the live site by themselves.

A few things are managed in code and cannot be changed from WordPress. See Guide 09 for the list.

How long until my change show up?

- **Edited an existing page:** about 1 minute. Refresh the live page and it is there.
- **Added a brand new page:** it appears the first time someone opens its web address.
- If you do not see it after a minute, see Guide 08 (Troubleshooting). Usually you just wait a moment and refresh.

Where everything lives (your map)

Log in to WordPress here: <https://intervention.com/wp-admin/>

What you want to change	Where to go in WordPress	Which guide
Words or images on a normal page	Pages	Guide 01
Create a new page	Pages, Add New	Guide 02
Blog article	Posts	Guide 03
A service (Drug Intervention, etc.)	Detail Pages	Guide 04
The top menu	Appearance, Menus	Guide 05
Phone number or email	Global Settings	Guide 06
Hide, delete, or reorder something	Pages / Detail Pages	Guide 07
A service is hidden on the live site but published in WP	contact the developer	Guide 07
“I don’t see my change”	(troubleshooting)	Guide 08

Two golden rules

1. **Always click the blue “Update” (or “Publish”) button after any change.** If you do not save in WordPress, nothing travels to the live site.
2. **Do not delete pages you are unsure about.** Hiding (unpublishing) is safer and reversible. See Guide 07.

That is the whole idea. Pick the guide for the task you want and follow the steps.

Guide 01: Edit the Words or Images on an Existing Page

Use this when: you want to fix a typo, change a sentence, or swap a picture on a page that already exists (for example the About page, a state page, or the Insurance page).

2

Where to go

1. Log in: <https://intervention.com/wp-admin/>
2. In the left menu, click **Pages** .
3. Direct link: https://intervention.com/wp-admin/edit.php?post_type=page

Steps

1. In the list of pages, find the page you want. You can type its name in the search box at the top right.
2. Hover over the page name and click **Edit** .
3. Change the text directly, just like typing in a document.
4. To replace an image: click the image, click the small pencil or “Replace” icon, then choose a new image from the media library or upload one.
5. When you are done, click the blue **Update** button (top right).

When will I see it on the live site?

About 1 minute. Open the live page in your browser and refresh (press the refresh button or F5). Your change is there.

Tips

- Change one thing, save, and check the live site. This makes it easy to see the effect.
- If you paste text from Microsoft Word, use the “Paste as plain text” option if available, so odd formatting does not come along.
- You cannot break the page design. The website automatically wraps your words in the correct fonts, colors, and spacing.

Watch out

- Do not change the page’s “Permalink” (its web address) unless you really mean to. Changing it can break links that point to the page. See Guide 07 if you must.
- A couple of common old URLs are permanently redirected to new ones by the developer: `/about` → `/about-us` and `/resources-3` → `/resources`. These stay in effect even if WordPress permalinks change.

Guide 02: Add a Brand New Page

Use this when: you want to create a page that does not exist yet (for example a new city page, a new information page, or a new landing page).

Where to go

1. Log in: <https://intervention.com/wp-admin/>
2. In the left menu, click **Pages** , then **Add New** .
3. Direct link: https://intervention.com/wp-admin/post-new.php?post_type=page

3

Steps

1. Type the page **Title** at the top. This becomes the big heading on the page.
2. Write your content in the main area below. Use headings, bullet points, and paragraphs as normal.
3. Add images where you want them.
4. (Optional but recommended) On the right side, set a short **Excerpt** if you see that box. This becomes the page’s description in Google search results.
5. Click the blue **Publish** button (top right). Confirm by clicking **Publish** again if it asks.

The web address of your new page

WordPress creates the address from the title. For example, a page titled “Intervention in Dallas” becomes:

<https://intervention.com/intervention-in-dallas>

You can see and adjust this address in the **Permalink** box (usually near the top or in the right sidebar) before publishing.

When will I see it on the live site?

The very first time someone opens the new web address, the live site builds it and shows it. So:

1. Publish in WordPress.
2. Open the new page's address in your browser.
3. It appears. (The first open can take a couple of seconds. After that it is instant for everyone.)

Important: linking to your new page

A new page does NOT automatically appear in the top menu. If you want people to reach it from the menu, add it there. See Guide 05 (Navigation Menu).

You can also link to it from inside other pages using a normal text link.

Guide 03: Write or Edit a Blog Post

Use this when: you want to publish a new article, or edit an existing one, on the Intervention Blog.

Where to go

1. Log in: <https://intervention.com/wp-admin/>
2. In the left menu, click **Posts** .
3. Direct link (all posts): <https://intervention.com/wp-admin/edit.php>
4. To start a new one: **Posts** , then **Add New** , or <https://intervention.com/wp-admin/post-new.php>

4

Steps to write a new post

1. Type the article **Title** at the top.
2. Write the article in the main area. Add headings, paragraphs, images, and links as normal.
3. On the right, set a **Featured Image** . This is the thumbnail shown on the blog list. Look for the “Featured image” box and click “Set featured image.”
4. (Optional) Write a short **Excerpt** on the right. This is the summary shown on the blog list under the title.
5. Click the blue **Publish** button.

Steps to edit an existing post

1. Go to **Posts** .
2. Search for the article, hover over it, click **Edit** .
3. Make your changes.
4. Click **Update** .

Where it appears

- The article's web address comes directly from WordPress's permalink. If WordPress is set to publish posts under `/intervention-blog/`, the article appears at `https://intervention.com/intervention-blog/your-article-name`. If an admin changes the WordPress permalink base for posts, article URLs change too — tell the developer first before touching permalink settings.
- It also shows up automatically in the blog list at `https://intervention.com/intervention-blog`

When will I see it on the live site?

About 1 minute for both the article and the blog list. Refresh the live blog page to confirm.

Tip

Always set a Featured Image. Articles without one look empty in the blog list.

Guide 04: Edit or Add a Service (Detail Page)

Use this when: you want to change one of the services (for example Drug Intervention, Alcohol Intervention, Senior Support Services) or add a brand new service.

Services are special. They live in their own section called **Detail Pages** , not under normal Pages.

Where to go

1. Log in: `https://intervention.com/wp-admin/`
2. In the left menu, click **Detail Pages** .
3. Direct link: `https://intervention.com/wp-admin/edit.php?post_type=detail_page`

The fields you will see (and what they do)

When you open a Detail Page, you will see labeled boxes. Here is what each one controls on the live site:

Field	What it controls
Title (H1)Label (nav / card text)	The big heading at the top of the service page The short name shown in the menu and on service cards
Summary	The sentence under the heading, and the Google description
Intro paragraph	The opening line of the page body
Hero Image	Despite the name, this ONLY sets the thumbnail photo on the Intervention / Services card grid. It does NOT change the big photo at the top of the service page (that is set in code; see Guide 09).
Eyebrow	The small text above the heading (optional)
Parent Section	Whether it belongs under Intervention or Services
Slug	The last part of the web address
Order (Page Attributes box)	The position in the menu and card grid (smaller number = higher up)

Steps to edit an existing service

1. Go to **Detail Pages** .
2. Click the service you want to edit.
3. Change the fields you need (for example update the Summary or replace the Hero Image).
4. Click the blue **Update** button.

Steps to add a new service

1. Go to **Detail Pages** , then **Add New** .
2. Fill in the Title, Label, Summary, and Intro.
3. Choose the **Parent Section** (Intervention or Services).
4. Set the **Slug** (for example **grief-support**).
5. Set a **Hero Image** if you want one. Remember: this only becomes the thumbnail on the card grid; it does not change the big photo at the top of the service page.
6. Set the **Order** number in the Page Attributes box to control where it sits in the list.
7. Click **Publish** .

When will I see it on the live site?

About 1 minute. Both the service page itself and the section landing page (Intervention or Services) update together.

Important note about the top background photo

The per-section hero background (the big photo across the top of a service page) is baked into the website design and cannot be changed from WordPress. The field in WordPress is labeled **Hero Image**, which is misleading: it only sets the thumbnail used on the Intervention and Services card grid. Changing it will NOT affect the big photo at the top of a service page. If you want to swap a hero background, ask the developer.

Reminder

A new service does NOT automatically appear in the top menu. The Intervention and Services dropdowns update themselves from your Detail Pages (see Guide 05). Other sections of the menu may need a developer.

6

Guide 05: Change the Top Navigation Menu

Use this when: you want to add, remove, rename, or reorder links in the menu bar at the top of the website (Intervention, Services, Resources, About Us, Contact Us, and so on).

The top menu is NOT a pure mirror of Appearance > Menus. Some parts come from WordPress, some are automatic, and some are set by the developer. Read this before you edit, so you know what will actually change.

Where to go

1. Log in: <https://intervention.com/wp-admin/>
2. In the left menu, click **Appearance** , then **Menus** .
3. Direct link: <https://intervention.com/wp-admin/nav-menus.php>

What you CAN change from WordPress

- **Top-level menu items** such as Intervention, Services, Resources, About Us, Contact Us. These are controlled by Appearance > Menus. Add, rename, remove, or reorder them here and the top bar updates.

What is automatic (do not try to edit by hand)

- **The Intervention dropdown children** come from the Detail Pages whose Parent Section is “Intervention,” ordered by the **Order** field in Page Attributes.
- **The Services dropdown children** come from the Detail Pages whose Parent Section is “Services,” ordered by the **Order** field in Page Attributes.
- Editing children under Intervention or Services in Appearance > Menus has no effect on the live site. To change these dropdowns, edit the Detail Pages themselves (Guide 04 and Guide 07).

What is set by the developer (you cannot change from WordPress)

- **The About Us dropdown children** are hardcoded in the code. Changing them in Appearance > Menus does nothing. Ask the developer.
- **The Resources dropdown children** are hardcoded in the code. Changing them in Appearance > Menus does nothing. Ask the developer.
- **Contact Us** always renders as a single link with no dropdown, even if WordPress has children listed under it.
- The `/family-class` link is intentionally hidden from the top bar.

Steps for the parts you CAN change

To add a top-level link

1. On the left, choose what to add: **Pages** , **Posts** , **Custom Links** , or **Categories** .
2. Tick the box next to the item you want, then click **Add to Menu** .
3. The new item appears in the menu list on the right.
4. Click **Save Menu** (bottom right).

To reorder top-level links

1. In the menu list on the right, click and drag an item up or down.
2. Click **Save Menu** .

To rename a top-level link

1. Click the small arrow on the right of the menu item to expand it.
2. Change the **Navigation Label** .
3. Click **Save Menu** .

To remove a top-level link

1. Expand the menu item (click the arrow).
2. Click **Remove** .
3. Click **Save Menu** .

When will I see it on the live site?

About 1 minute. Refresh any page on the live site and the new menu appears everywhere (the menu is the same on every page).

7

Tip

To add a brand new page (Guide 02) to the menu as a top-level item, first publish the page, then come here and add it using the **Pages** box on the left. For a new service, add it as a Detail Page (Guide 04) and it will appear in the Intervention or Services dropdown automatically.

Guide 06: Change the Phone Number and Email

Use this when: you want to update the phone number or email address that appears across the whole website (in the header, footer, and contact areas).

You only change this in ONE place. The website updates it everywhere automatically. (Two older pages still use a hardcoded number. See Guide 09.)

Where to go

1. Log in: <https://intervention.com/wp-admin/>
2. In the left menu, click **Global Settings** .
3. Direct link: <https://intervention.com/wp-admin/admin.php?page=global-settings>

Steps

1. You will see boxes for the phone number and email.
 - **Phone (display)** : how the number looks to visitors, for example (800) 789-1605 .
 - **Phone (href)** : the number used when someone taps to call. Type just the number with the country code, for example +18007891605 . Do NOT add tel: in front and do NOT add spaces. The site puts tel: on automatically when it builds the link.
 - **Email** : the contact email address.

2. Change the values you need.
3. Click the blue **Update** button (or “Save Changes”).

When will I see it on the live site?

About 1 minute. Because this affects the header and footer on every page, refresh any page and you will see the new number and email site-wide.

Watch out

- Keep the two phone fields matching. If the display shows (800) 789-1605 , the href field should be +18007891605 (the same digits, no spaces or brackets, with +1 in front, and no tel: prefix).
- Do not touch the “Revalidation” boxes on this page. Those are technical settings that keep the live site connected. The Revalidation Site URL must be <https://intervention.com> and the Secret must match the REVALIDATE_SECRET value in the Amplify environment variables. If either is empty or wrong, your WordPress saves will not reach the live site within a minute — they’ll only arrive after up to an hour. If you suspect this is misconfigured, contact the developer.

Guide 07: Hide, Delete, or Reorder a Page

Use this when: you want to take a page off the live site, remove it completely, or change the order that services appear in.

8

Hide a page (safe and reversible)

Hiding is the safe choice. The page comes off the live site but is kept in WordPress so you can bring it back.

1. Go to **Pages** (or **Detail Pages** for a service).
2. Open the page.
3. On the right, find the **Status** setting (it says “Published”).
4. Change it to **Draft** , or click **Switch to Draft** .
5. Click **Update** .

The page disappears from the live site within about a minute. To bring it back, set the Status to **Published** again and click Update.

Delete a page (permanent)

Only do this if you are sure. Deleting cannot be easily undone.

1. Go to **Pages** (or **Detail Pages**).
2. Hover over the page name.
3. Click **Trash** .
4. The page is removed from the live site within about a minute.

If you deleted something by mistake, go to the **Trash** tab at the top of the Pages list and click **Restore** , then re-check the live site.

Reorder services

Services (Intervention and Services sections) appear in an order you control with a number.

1. Go to **Detail Pages** .
2. Open the service you want to move.
3. Find the **Page Attributes** box (usually on the right) and the **Order** field.
4. Set the number. Smaller numbers appear first (1 is at the top, then 2, then 3, and so on).
5. Click **Update** .
6. Repeat for other services so the numbers make the order you want.

The menu and the service card grid both follow these numbers.

Hidden services

Some services are set to **Published** in WordPress BUT are intentionally hidden on the live site by the developer. You cannot unhide them from WordPress. These are:

- **Concierge Assessment (CARE)** — hidden everywhere on the live site
- **On-Set Care Unit** — hidden everywhere on the live site
- **Early Autism Intervention** — hidden from the top navigation only
- **Family Class** — hidden from the top bar only (still appears under Resources)

To restore any of these to the live site, ask the developer to remove it from the suppression list in the code.

When will I see it on the live site?

About 1 minute for all of the above. Refresh the live site to confirm.

Watch out

- If you delete or hide a page that is linked from the menu, the menu link will break. Remove it from the menu too (Guide 05).

Guide 08: “I Don’t See My Change” (Troubleshooting)

Most of the time the fix is simple. Work down this list in order.

9

1. Did you save in WordPress?

The most common cause. Every change needs the blue **Update** or **Publish** button. If you did not click it, nothing traveled to the live site. Go back and click it.

2. Wait one minute, then refresh

Changes take about a minute to travel. Wait 60 seconds, then refresh the live page (press F5, or the browser refresh button).

3. Do a “hard refresh” to beat your browser’s memory

Your browser sometimes shows an old saved copy. Force it to fetch a fresh one:

- **Windows:** press **Ctrl + Shift + R**
- **Mac:** press **Cmd + Shift + R**

4. Check you edited the right page

Make sure the page you edited in WordPress is the same one you are viewing on the live site. Compare the web addresses. It is easy to edit one page and check another.

5. Is the page Published?

If the page Status is anything other than **Published**, it will not show on the live site. Open the page in WordPress and confirm the Status says **Published** (see Guide 07). These statuses all keep a page off the live site:

- **Draft** — not yet published
- **Private** — only logged-in WordPress users can see it
- **Scheduled** — will publish at a future date and time; not live yet
- **Password-protected** — only visitors with the password see the content

6. For a brand new page: open its address directly

A new page appears the first time its web address is opened. Type the full address into your browser and press Enter. Give it a couple of seconds the first time.

7. New page or service not in the menu?

New top-level pages do not join the menu automatically. Add them yourself (Guide 05). New services DO appear in the Intervention or Services dropdown by themselves once their Parent Section and Order are set (Guide 04).

8. Is the service in the hidden list?

A few services are set to Published in WordPress but hidden on the live site by the developer. See Guide 07 (Hidden services).

Still not showing after all this?

Then it may be a technical connection issue between WordPress and the live site. Contact the developer and tell them:

- Exactly what you changed
- The web address of the page
- The time you saved it
- That you already tried waiting a minute and a hard refresh

That information lets them fix it quickly.

10

Guide 09: Known Limitations and Gotchas

A short list of things that are NOT managed from WordPress today. If you need to change any of these, ask the developer.

Hero backgrounds on service pages

The big photo across the top of every Intervention or Services page is set in the website code, not in WordPress. Changing the **Hero Image** field on a Detail Page updates only the thumbnail on the card grid, not the actual hero. The field name “Hero Image” is misleading. See Guide 04.

Nav dropdowns for About Us and Resources

The dropdown items under About Us and under Resources are set in the code. Editing them in Appearance > Menus has no effect. The Intervention and Services dropdowns ARE automatic from Detail Pages. See Guide 05.

Phone number on /insurance and /interventionists-by-state

These two pages currently show a hardcoded phone number. If you change the phone in Global Settings (Guide 06), these two pages will NOT update until the developer refactors them. That change is planned. For every other page, Global Settings is the one place that controls the phone.

Contact form (HubSpot)

The contact form on /contact only works if **CAPTCHA is DISABLED** in the HubSpot form settings. If CAPTCHA is on, submissions silently fail with **FORM_HAS_RECAPTCHA_ENABLED** and nothing reaches HubSpot. If a user reports that the form isn't working, check the HubSpot form options first (Forms > this form > Options) before contacting the developer.

Hidden services

Some services stay invisible on the live site even when their Status is Published. See Guide 07 (Hidden services) for the current list and how to restore one.

11
